"Cloning and sequencing of the gene encoding a 125-kilodalto surface-layer protein from Bacilius sphaericus 2362 and of a cryptic gene.;

J. Bacteriol. 171:4178-4188(1989).

-I- FUNCTION: THE S-LAYER IS A PARACRYSTALLINE MONO-LAYERED OF PROTEINS WHICH COAT THE SURFACE OF BACTERIA.

-I- SUBCELLULAR LOCATION: Cell wall.

-I- SIMILARITY: Contains 3 S-layer homology (SLH) domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-OCT-1994 (Rel. 30,

Also included are (1) a peptide comprising PI flanked by amino acids representing antigen processing sites; (2) a polypeptide comprising at least two of the peptides in (1); (3) a nucleic acid encoding one of the claimed peptides or polypeptides; (4) a vector comprising the above nucleic acid; (5) a host cell comprising the above nucleic acid; (5) a host cell comprising the above nucleic acid; (5) a detecting and/or enumerating CD8+ T cells against mycobacterium, comprising tetrameric complexes of MIC (major histocompatibility group) class I and one of the claimed peptides or polypeptides. The molecules of the invention are used to prepare a
                                                                                                                                                                                Modified-site

The antagonist peptide inhibits the bradykinin reponse when injected as a bolus admixture of bradykinin plus antagonist by either the ia. or iv. route of administration, or when administered as an infusion. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAR51218;
                     AAR51217 is an example of a generic bradykinin antagonist peptide having a non-arcmatic residue in the 5-position. The antagonist peptide inhibits the bradykinin reponse when injected as a bolus admixture of bradykinin plus antagonist by either the ia. or iv. route of administration, or when administered as an infusion.                                                                                                                                                                                                                          The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                                                                                                                                                                                                 A set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of the human genome, useful in an assay for screening and identifying of one or more novel peptides which are drug candidates or pro-drugs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14-JUN-2001
